

GENTLEMEN, START YOUR ENGINES— BUT FIRST CHECK UNDER THE HOOD.

Prostate cancer is one of the most common types of cancer in American men, with more than 220,000 new cases diagnosed annually, and is the second-leading cause of cancer death in men.

The 2nd Annual Grand Prix of Scottsdale will roar through the streets of downtown Scottsdale, November 4-6. This unique, stylish event—free to the public—celebrates Vintage Mini Racers and the nostalgia of the Roaring '20s era.

The Prostate Cancer Research Institute (PCRI), AMIFund.org, Phoenix Molecular Imaging and several enthusiastic sponsors are teaming up to support a dedicated vintage mini racer and team to benefit Prostate Cancer Awareness.

One in seven American men—fathers, sons, husbands, brothers, partners and friends—will be diagnosed with prostate cancer in his lifetime. AMIFund.org, Phoenix Molecular and PCRI are working tirelessly every day to help with prostate cancer awareness and research.

While the exact cause of prostate cancer is still not known, it is known that the risk of developing the disease increases as you get older, and that early detection is the key to survival. In fact, when detected early enough, the chance for survival is very good.

The Prostate Cancer Awareness team will race at the three-day Grand Prix of Scottsdale, while a support team will provide free PSA testing and Prostate Cancer Health information. The PSA test is one of the most important tools available to aid in the early detection of prostate cancer. It measures the level of PSA, or prostate-specific antigen, in the bloodstream. PSA is usually found in the blood in low levels, as very little PSA escapes from a healthy prostate. Elevated PSA readings can be a sign of prostate cancer or other prostate conditions.

Your life could depend upon getting tested. Early detection tools such as PSA tests should be part of a regularly scheduled checkup for men starting at age 40. It's an

important way to establish baseline information, identify problems and begin treatment as soon as possible. After all, early detection is your best chance for a cure.
